Q: Retrofit and HttpURLConnection for Android I am trying to migrate some legacy code to retrofit and have been using HttpURLConnection. In all our systems we need to have a secure URL that requires a web-site certificate. HttpURLConnection does not support this and then we cannot download the certificate from I then started using OkHttpClient in my test app. However, OkHttpClient seems to use a different connection pool than HttpURLConnection. That means that subsequent calls to the URL are made from the HttpURLConnection ConnectionPool which results in a "Too many connections" error. I asked on the Retrofit Google Group and had some interesting responses from Alessandro Kardol. That question is how to get OkHttpClient to use the same connection pool. He suggested using the request context. But I was wondering what the best way to achieve this was? A: If your OkHttpClient really used a separate connection pool, then there isn't a way to make it use a ConnectionPool similar to HttpURLConnection. A separate connection pool is only really necessary for one purpose, sending multiple requests simultaneously from one thread. This is an inefficient way to use the HTTP/2 protocol if you're in the middle of doing that. OkHttpClient's new connection pool is a fair compromise between these two "extreme" solutions. The upgrade to GOOGLE\_SECRET\_ACCESS\_TOKEN for users of the App Engine Admin Console or SDK should now have taken place, assuming the token was generated with the application\_fu\_1. In order to upgrade and move to the new version of the Android, iOS 9df0af710a
