History AutoCAD's roots go back to 1988 when Softimage Systems released AutoCAD, an integrated 2D/3D CAD system, with an emphasis on engineering. The initial version was called CAD/CAM, and like AutoCAD today, included 2D and 3D capabilities. CAD/CAM was designed to solve the business problems encountered when drafting and designing mechanical and civil engineering projects. CAD/CAM continues to be a key component of AutoCAD, as well as the other product lines from the same company. Version 2, developed in 1989, was renamed AutoCAD from "AutoCAD CAM." Version 3, released in 1992, was renamed AutoCAD LT from "AutoCAD LT CAM." In the early 1990s, the term "CAM" was used to describe a computer aided drafting software product, and became a trademark of its own. In 1993, Micrografx released a desktop version of AutoCAD LT. Although Autodesk had provided support for AutoCAD LT for several years, Micrografx used their relationship to develop the AutoCAD LT plug-in, which was also made available for use with ObjectARX and Visual LISP. Version 4.0, released in 1995, was the first to use the official "AutoCAD" name, and included full 2D drafting, vector-based 3D drawing, and the ability to import, edit, and export DWG files. In 1996, Autodesk released AutoCAD Model Derivative (MOD) (Version 6.0), a limited 3D modeling component a1d647c40b

We showed that the boom in new-home construction is slowing down, and this week's editorial pointed out that, when you combine this fact with the opening of the new Florida Hospital Sarasota campus in downtown Sarasota, there just might not be enough new businesses to meet the demand for housing and for retail space. The local economy may be hanging by a thread, and if the state should rein in the property-tax credit on new homes, that thread might snap. The good news, however, is that if the Legislature should limit the new-home tax credit, this likely would not be the only area in which the state would be stingy. Florida Watchdog has just released a report showing that, based on the Legislature's own estimates, taxpayers throughout the state will pay more property taxes in 2010 than they did in 2006. The state estimates that new residential construction will increase 4.5 percent this year. But if the Legislature doesn't reduce the new-home credit to pre-existing-home levels, taxes will go up 4.3 percent. If the Legislature does nothing, homeowners will see a 4.5 percent increase in property taxes, according to the report. If it reduces the new-home tax credit to pre-existing-home levels, taxes will go up 4.3 percent. TaxWatch also reports that local governments would see their revenues go up 9.2 percent, at a time when they are being asked to make big budget cuts. (See the chart on page 2.) "Our taxes go up every year, and it's due to the Legislature's largesse toward new home builders," said John T. Fleming, president of the Florida Municipal League. "We're running a $5 billion deficit, and they add another $2 billion in revenue to the state budget. But what we
