Q: Designing a small circuit with analog control (dc/ac voltage controlled oscillator) As the title says, I am designing a small circuit to be connected between two circuits, both of which are isolated and may be replaced with a signal generator. The reason why I need a multiple frequency generator is because I am trying to provide a very narrow bandpass filter (ie no other signals besides my desired frequency, say 1kHz, can be output). The purpose is to isolate the desired signal from the other signals. Since the second circuit outputs a dc level, I am using an analog voltage controlled oscillator (VCO) to output a sine wave, which is then filtered by an analog filter and converted to an unipolar ac signal with a bandpass filter. Note the two circuits work from a single DC power supply. The problem is that I have to use a line transformer, because the voltage difference between the two circuits is too high for a single wire, and I do not have a power supply with a rated minimum voltage difference. So a line transformer between the two circuits is necessary, which will serve as an isolation barrier. The VCO will be part of a signal generator, which has an input power supply with a rated maximum voltage difference between the two circuits. The circuit will be implemented using C2000 parts, which means I have to use 2 push buttons instead of one. I am currently designing the circuit, and I cannot provide the exact values of inductor and capacitor that I need. I will add a diagram of my circuit below. Any suggestions? A: Inductors are typically much more efficient (energy vs. size) than transformers. If possible I'd use a linear H-bridge instead of the switches as they typically consume much less power. If you want to make a very narrow bandpass filter, then there's no way around an inductor(s), but you should be able to use a smaller one. The critical parameter is the bandwidth of the system. If you can't achieve that, then you have very little to gain from your VCO. Edit: Based on the input from @Dan D., I'd suggest using a L-C filter. Typically the bandwidth of this is not your choice, the internal electronics of the microelectronic device will have a chosen bandwidth for their own internal topology, but the filter can be

Alabama's candidate for statewide elections is getting a rude awakening. This is after a major election fraud scandal involving some local officials came to light. The allegations surround an alleged purge of the state's controversial voter registration system. Multiple voter registration files across the state were scrubbed. It's unknown if the claim of a purge is true. But critics believe this is just the tip of the iceberg. An investigation by the Washington Post found that during the 2018 Alabama governor's race, at least one county prevented voter registration forms from being submitted online. This kind of thing could possibly happen in an administration that is trying to discourage voter turnout. The Secretary of State's office was put in charge of the state's voting system. Secretary of State Jim Merrill is holding a press conference at 2:00 Eastern Time to address the allegations. The Washington Post found that in some counties in Alabama, voter registration forms were not getting sent to the Secretary of State's office. They were being sent to the county registrar instead. These forms were then used to determine if people actually voted in the 2018 election. In Sumter County, about 17 percent of the registered voters didn't cast a ballot. Alabama voter registration forms mysteriously moving to county registrars. We're not sure what's happening here. Election officials say there's no problem with the ballot. At the very least, the voter registration forms appear to have been suppressed — so there's a strong possibility that they would have been used for voter suppression. — Matt McClellan, Chattanooga Herald (@mattmccllellan) February 11, 2019 Matt McClellan is the state political reporter for the Chattanooga Times Free Press. After learning about the problem, he posted a story on Twitter. "Alabama voter registration forms mysteriously moving to county registrars. We're not sure what's happening here. Election officials say there's no problem with the ballot, but at the very least the voter registration forms appear to have been suppressed. So there's a strong possibility that they would have been used for voter suppression." He went on to say that voters who used a mobile app to submit their voter registration forms were completely cut off from being registered to vote. Alabama. You show me what a fraud-free voting process looks like. It's a pretty short list. But the point is that suppression
