P.S: Don't miss the chance to support us, rate this game, and leave a message on Google Play! A: I found a solution for this (thanks to @Joe and @Joey) This is the solution: Install Xposed framework (you need to have rooted phone) Open Xposed framework. Install the Overlay & Downtime modules and reboot (you need to have rooted phone) Select the option "Enable Overlay". (optional) If you

have Blur notifier installed, select the option "Use Blur Notifier" Go to Xposed Installer (overlay search for xposed.installer.pl) Install Overlay Overlays (press Shift+C) Reboot Install Blur DownTiming Overlay (Android version 7.0) Reboot (Optional) Install SlowDown Interrupt Overlay (Android version 7.0) Reboot Open the game (open the game using bluetooth connection / download the game file from Google Play / etc) Start the game (Optional) If you have Blur notifier installed, select the option "Use Blur Notifier" After the last step the game will be a lot slower. Also the animation will be less smooth. In my case I noticed a performance impact of about 40% (game start was about 20 fps, after installing the overlays it was about 15 fps). If you don't notice any performance problem, you can disable the overlays again. This solution is tested on the following phones: Galaxy S

I've had such a fun experience of this game. I can't stop looking out the window at the planet. I would tell you about the colors of clouds and sparkles of the sun but those are the only things I see. They are utterly beautiful. The soundtrack feels like the distant rumble of two gigantic spaceships meeting in the distance that somehow have a romantic future ahead of them. (it's an incredibly cheesy thought so I feel no shame in saying it.) Am I ever looking forward to when I get to the next platform. It's been a rather emotional experience. One day they will broadcast this

footage and people will say how unbelievable it was. Oh, I have a video if you want to see me as I took this incredible journey. Thanks! I've had such a fun experience of this game.
