Other design-centric capabilities are useful, too. You can drag content around to different areas within a web page, and use the slice tool to easily make two or more images for any sort of presentation. Videos with white backgrounds can be viewed and animated, and you can create arrangements with image-based sketching tools. While this certainly isn't as powerful an application as retail versions of Photoshop, the web version is still useful, and you can use it to quickly make memes, share images of funny cat memes, and make banners. Free online services are an important part of the Adobe app mix. Photoshop for the web includes a Web Content Panel with an online assets collection. There are image editing tools to add panoramas, animations, textures and more on layers. One key way to save time when you're designing a web page or other marketing collateral is to start with a design you like that's already finished. Then you can just replace images with the ones you use for your website. Better yet, you can "flip" the templates you already have set up into a positioning that creates the perfect headline, for example. These tabs make it easy to find colors and preset styles, and you can easily drag and drop photos or text into a layout. Photoshop for the web also includes a number of other design-oriented features, such as the ability to create multiple pages, work with texture overlays and more. All told, it's a full-fledged design tool if you're using it for web purposes.
